USA FROM THE SKY (NEW 4th episode)

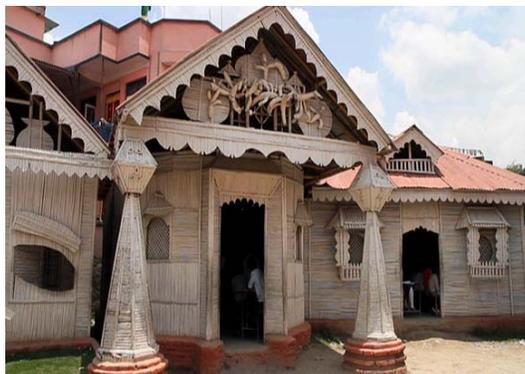

From the steep cliffs and sequoia forests of North California to the long beaches of Florida, to the Bayous and swamps of Louisiana and on to the wild coasts of Maine, USA FROM THE SKY is a panoramic journey along the most sought after and wildest coastlines in the world

On both coasts we find the most amazing megalopolises of the planet: Los Angeles and New York. And there are many others too, such as San Francisco, New Orleans, not to mention Miami, San Diego, Seattle and Boston, strung along the American coastline. Great cities that buzz, seduce and revitalize.

Among the not-to-be-missed locations in the culture and history of the United States, we find Key West, right at the southern tip of the United States, the highly esteemed islands of Nantucket and Martha's Vineyard on the east coast, the popular seaside resort of Daytona on the west coast famous for its motor racing circuit and the well-known beaches near Los Angeles, California.

1. EASTCOAST – THE UNITED STATES FROM THE SKY
2. WESTCOAST – THE UNITED STATES FROM THE SKY
3. USA – SOUTHCOAST FROM THE SKY
4. NORTHWEST COAST – THE UNITED STATES FROM THE SKY

BAMBOO SCHOOLS

In a Nepal still exhausted after a revolution that was barely over, Uttam Sanjel, a young actor honed by the rigors of Bollywood, had a dream: providing an education for all of Nepal's poor children!

The film combines a slice of his unrelenting activity with the self-portraits of three young pupils who have taken up the camera to film their own lives.

We discover an extraordinary creation very different from the tourist clichés, a remarkable success story in the midst of the anarchy of today's Nepal.

This multi-faceted account takes us to the heart of the struggle for education from a man with unflagging determination and children desperate for knowledge. But how long can our hero withstand the obstacles facing the bamboo schools?

SPRATLYS – DANGEROUS GROUND

Somewhere off the coasts of Vietnam and Malaysia, next to the Philippines, in what is known as the South China Sea lie the Spratly Islands, a group of more than 750 reefs, islets, atolls, cays and islands that form a ragged archipelago.

Whoever owns the Spratlys holds a geostrategic key to the region. The vying countries have decided to occupy the terrain by sending civilian and military personnel to survive on these remote fragments of rock, willing hostages of a diplomatic tug of war. They are playing out a tragicomic fable.

The Spratlys are a lawless zone, a paradise for traffickers and smugglers of all kinds. The Chinese, Vietnamese and Filipinos maintain excellent relations in their common efforts to plunder the regions resources.

ARCHITECTS ON THE FRONTLINE

It's a formidable challenge – building places in a rapidly urbanising planet that are fit for humans to inhabit. Some take the view that our architects and town planners are failing us. But a new kind of architect is rising to the challenge by thinking outside the square. They're designing buildings that aren't just aesthetically pleasing, but also help to make our increasingly crowded planet a better place to be.

ARCHITECTS ON THE FRONTLINE takes us behind the scenes of the world's richest prize in architecture - The Aga Khan Award for Architecture. In 2008, 401 projects were presented for consideration of which 19 were selected for competition and 5 winners were chosen at the end of the two year period by an independent Master Jury.

The Aga Khan Development Network focuses on health, education, culture, rural development, institution-building and the promotion of economic development. It is dedicated to improving living conditions and opportunities for the poor, without regard to their faith, origin or gender.

EPISODE 1: In the first episode, we hear from the master jury and steering committee members including UK artist Anish Kapoor and world-renowned architect Norman Foster along with the first 8 finalists.

EPISODE 2: This episode presents the final 11 finalists.

EPISODE 3: This last episode concludes the series by featuring the five chosen winning projects during the ceremony in Doha, Qatar:

1. BRIDGE SCHOOL (CHINA)
2. THE WADI HANIFA WETLANDS (SAUDI ARABIA)
3. THE MANDINAT AL-ZAHRA MUSEUM (SPAIN)
4. THE IPEKYOL TEXTILE FACTORY (TURKEY)
5. THE REVITALISATION OF THE RECENT HERITAGE OF THE CITY OF TUNIS (TUNISIA)

MY LIFE ON THE WEB

Internet, a tool for communication and exchange can also come back into our lives like a boomerang! Irrespective of age, more and more Internet users are playing at, "Do you want to be my friend?" and "My friends' friends are my friends".

Illustrated with photos and personal stories, our lives, loves and states of mind are posted and written down for everyone to see... forever. Employers and headhunters have been quick to see the benefit in collecting as much personal information as possible in their new recruitment policies.

In this era of globalisation, our lives are spread out on the web for all to see. "Registered, filed, surveyed, tracked, oppressed..." there's no shortage of terms to alert us to the dangers we're courting and the impossibility of extricating ourselves from the web.

From San Francisco to the cyber-café of Berlin and Paris, "MY LIVE EXPOSED ON THE WEB" explores the world of social networks and questions the dangers inherent in a space that can be entered with just a click.

GOLDEN GOLD

Worldwide economic turmoil is driving gold's longest bull run in the last six decades. The thirst for this metal seems inextinguishable and it is reshaping the lives of people around the world.

Indeed, this infatuation has unintended consequences. For instance, gold fever among the London bankers endangers an Indonesian tropical paradise and its development model based on the preservation of nature and traditional activities.

This edifying investigation draws a parallel between the setup of the gold market controlled by a handful of financiers and the unexpected effects of speculation in Indonesia, Europe and Peru.

NATURE INC.

Nature is priceless, but what if we try to put a price on it? What does it cost in cold hard-cash not to preserve ecosystems and how much can be made by investing in it?

This series reveals just how much nature is worth to our economy ... how a decrease in the honeybee population can threaten the \$2 billion almond industry in California; how preserved watersheds provide renewable power and clean water to vital industries; how coral reefs are worth \$30 billion a year; mangroves that save lives; and how invasive species cost the global economy a staggering \$1.4 trillion a year...

1. A FRUIT AND NUT CASE
2. TREES ON TAP
3. THE ALIENS HAVE LANDED
4. CORAL CASHPOINT
5. SLIPPERY SLOPES
6. BLOOM OR BUST
7. NATURAL PREVENTION
8. DOING WHAT COMES NATURALLY

IN THE WAKE OF THE TITANIC: THE MONTMAGNY STORY

In the weeks that followed the sinking of the Titanic in April 1912, the CGS Montmagny, a Canadian resupply ship, is chartered to recover the victims' corpses. The expedition allows a number of corpses to be pulled from the ocean, including one still grasping a life preserver almost a month after the disappearance of the liner.

Two years later, the Montmagny shares the same tragic fate as the Titanic: it goes down in its turn, hit by the collier Lingan, leading to the death of an officer and two families of passengers. Since then, the Montmagny has disappeared from memory.

This fascinating documentary uncovers the unknown story of this modest vessel with the aid of archival documents, including some never before seen on screen, interviews with historians and gripping reconstructions. Besides the discovery of the wreck, the production team is even able to find a priceless relic from the Titanic : the life preserver salvaged by the Montmagny's crew.

ARCHITECTS OF CHANGE

ARCHITECTS OF CHANGE is a 20-part series that uncovers today's new types of pioneers. They are farmers, chemists, architects, doctors, tradesmen and bankers who are looking for and using innovative solutions to counteract the threats weighing against our future. Far from being political or economical militants, they are, above all, entrepreneurs. They have decided to undertake new ways of obtaining sustainable and lasting growth for mankind and our planet.

1. GROWTH THE GREEN WAY
2. SPREADING HOPE
3. PHILANTHROPY AND CAPITALISM: AN UNLIKELY MARRIAGE?
4. THE NEED OF BIODIVERSITY
5. THE RIGHT TO BE HEALTHY
6. NOTHING IS LOST
7. TO INNOVATE IS TO IMITATE
8. MADE TO LAST
9. ECONOMICS OF TASTE
10. THE TRADITIONAL AND THE NEW

NEW EPISODES !
